*As this unit seven evolution of living things answers, it ends up physical one of the favored books unit seven evolution of living things answers collections that we have. This is why you remain in the best website to look the amazing book to have.*

### **Unit Seven Evolution Of Living**

Neontology is a part of biology that, in contrast to paleontology, deals with living (or, more generally, recent) organisms. It is the study of extant taxa (singular: extant taxon): taxa (such as species, genera and families) with members still alive, as opposed to (all) being extinct. For example: The moose (*Alces alces*) is an extant species, and the dodo (*Raphus cucullatus*) is an extinct species.

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

### **Evolution - Wikipedia**

Evolution: Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations. It is one of the keystones of modern biological theory.

Of course the evolutionists would say that man evolved from a common ancestor with apes, not apes as we see them today. Nevertheless, you are right that it is rather strange that none of the supposed intermediates were fit to survive; all of them became extinct (there are oodles of living creatures that can be found as fossils, even much, much older than any 'ape-man' according to evolutionary ...
