A difference in two perfect squares by definition states that there must be two terms, the sign between the two terms is a minus sign, and each of the two terms contain perfect squares. The answer after factoring the difference in two squares includes two binomials. One of the binomials contains the sum of two terms and the other contains the difference of two terms.

Factoring Polynomials - AlgebraLAB

Nothing like a good criminal investigation to liven up number sense! In this project, students will work in teams to investigate the culprit of six fictional thefts. The criminal has left six messages, layered with algebra. Teams will work to build a case and present their findings to the court. Hop...

CSI: Algebra -- Unit 9 -- Factoring & Quadratics by Clark ...

It's always easier to understand a new concept by looking at a specific example so you might want scroll down and do that first. This formula only works when $a = 1$. In other words, we will use this approach whenever the coefficient in front of x^2 is 1. (If you need help factoring trinomials when $a \neq 1$, then go here.)
