Mintzberg et al. talk about intended strategy and deliberate strategy in their model of business strategy; the difference between the two terms is not quite clear.

What is the difference between intended strategy and ...

A camera works with the light of the visible spectrum or with other portions of the electromagnetic spectrum. A still camera is an optical device which creates a single image of an object or scene and records it on an electronic sensor or photographic film. All cameras use the same basic design: light enters an enclosed box through a converging/convex lens and an image is recorded on a light ...

The concept of remainder after division is not uniquely defined, and the two functions mod and rem each compute a different variation. The mod function produces a result that is either zero or has the same sign as the divisor. The rem function produces a result that is either zero or has the same sign as the dividend.. Another difference is the convention when the divisor is zero.

Remainder after division (modulo operation) - MATLAB mod

By successively multiplying the new element , it eventually loops around to become something already generated, something like a ring, that is, is new but is an integer. All algebraic numbers have this property, e.g., satisfies .. A ring must contain at least one element, but need not contain a multiplicative identity or be commutative.

Buffon's needle problem asks to find the probability that a needle of length l will land on a line, given a floor with equally spaced parallel lines a distance d apart. The problem was first posed by the French naturalist Buffon in 1733 (Buffon 1733, pp. 43-45), and reproduced with solution by Buffon in 1777 (Buffon 1777, pp. 100-104). Define the size parameter x by $x=l/d$.
