Construction workers use scaffolding as a temporary platform to stand on and perform work above ground level. Due to the intricate nature of its construction and the many parts needed for proper assembly, a three-colored tag system has been devised to notify bystanders and workers of the status of the scaffolding, thus maximizing safety and efficiency.

In the theory of computation, a Mealy machine is a finite-state machine whose output values are determined both by its current state and the current inputs. This is in contrast to a Moore machine, whose (Moore) output values are determined solely by its current state. A Mealy machine is a deterministic finite-state transducer: for each state and input, at most one transition is possible.
