A central angle is an angle  $\angle AOC$  with endpoints A and C located on a circle's circumference and vertex O located at the circle's center (Rhoad et al. 1984, p. 420). A central angle in a circle determines an arc  $\text{arc}AC$ . For an inscribed angle  $\angle ABC$  and central angle  $\angle AOC$  with the same endpoints,  $\angle AOC = 2\angle ABC$  (Jurgensen et al. 1963, p. 328).

### **Central Angle -- from Wolfram MathWorld**

I appreciate Christopher Danielson's post on common numerator fraction division because it's important to examine how various algorithms work and how we can help our students become more flexible with their thinking. It's not surprising that I teach fraction division using rectangles, and I really believe the kids seem to grasp it better because it's visual.
