Parabens are preservatives used in a wide range of cosmetic products, including products for children, and some are permitted in foods. However, there is concern for endocrine disrupting effects.

**Possible endocrine disrupting effects of parabens and ...**

Endocrine disruptors are chemicals that can interfere with endocrine (or hormone) systems at certain doses. These disruptions can cause cancerous tumors, birth defects, and other developmental disorders. Any system in the body controlled by hormones can be derailed by hormone disruptors.

**Endocrine disruptor - Wikipedia**

The female reproductive system is made up of the internal and external sex organs that function in reproduction of new offspring. In the human the female reproductive system is immature at birth and develops to maturity at puberty to be able to produce gametes, and to carry a foetus to full term. The internal sex organs are the uterus, Fallopian tubes, and ovaries.

**Female reproductive system - Wikipedia**

**HEALTH CONCERNS:** The International Fragrance Association (IFRA) lists 3,059 materials that are reported as being used in fragrance compounds. Of these 3,059 ingredients, some have evidence linking them to health effects including cancer, reproductive toxicity, allergies and sensitivities.

The epigenome is a multitude of chemical compounds that can tell the genome what to do. The human genome is the complete assembly of DNA (deoxyribonucleic acid)-about 3 billion base pairs - that makes each individual unique. DNA holds the instructions for building the proteins that carry out a variety of functions in a cell.

**Epigenomics Fact Sheet | NHGRI**

Unique for its role in human reproduction, a gamete is a specialized sex cell carrying 23 chromosomes—one half the number in body cells. At fertilization, the chromosomes in one male gamete, called a sperm (or spermatozoon), combine with the chromosomes in one female gamete, called an oocyte. The function of the male reproductive system is to produce sperm and transfer them to the female ...

Metabolic processes are constantly taking place in the body. Metabolism is the sum of all of the chemical reactions that are involved in catabolism and anabolism. The reactions governing the breakdown of food to obtain energy are called catabolic reactions.

**24.1 Overview of Metabolic Reactions - Anatomy and Physiology**

Our bodies are made up of 11 basic organ systems that work together to manage all the functions that keep us healthy and alive. These systems, while interdependent, can become out of tune and when one is not functioning properly, the others will attempt to correct the problem and all the systems will work together to try to create what is known as homeostasis, a state of balance within the body.
