In order to obtain the solubility-pH profiles and determine S_0 for each compound, different buffer solutions of 0.1 M ionic strength covering a wide pH range were prepared. For monoprotic buffering electrolytes and phosphoric acid/dihydrogenphosphate buffer, the desired pH and ionic strength were obtained as follows: a given amount of a stock solution of the basic or acidic form of the ...

The table below provides information on the variation of solubility of different substances (mostly inorganic compounds) in water with temperature, at 1 atmosphere pressure. Units of solubility are given in grams per 100 millilitres of water (g/100 ml), unless shown otherwise. The substances are listed in alphabetical order. Contents

Experimental and computational approaches to estimate solubility and permeability in discovery and development settings are described. In the discovery setting 'the rule of 5' predicts that poor absorption or permeation is more likely when there are more than 5 H bond donors, 10 H bond acceptors, the molecular weight (MWT) is greater than 500 and the calculated Log P (CLog P) is greater ...

Crystallization is the (natural or artificial) process by which a solid forms, where the atoms or molecules are highly organized into a structure known as a crystal. Some of the ways by which crystals form are precipitating from a solution, freezing, or more rarely deposition directly from a gas. Attributes of the resulting crystal depend largely on factors such as temperature, air pressure, and ...
