Mealworm Behavior Lab What environmental factors trigger a mealworm response? Background Tenebrio molitor, more commonly known as the mealworm, or the darkling beetle, are part of the very large beetle family of insects. Mealworms are found throughout the world, but are most commonly found in warm, dry climates.

Mealworm Behavior Lab - StudyBio.org

Lab 1: Mealworm Behavior: Science as a Process I. Framing the Investigation: Introduction: Ethology is the study of animal behavior. Behavior is an animal's response to sensory input, and falls into two basic categories: learned and innate (inherited). Orientation behaviors place the animal in its most favorable environment. In taxis ,

Lab 1: Mealworm Behavior: Science as a Process

The fact that it isn't something physical that can be dissected in a lab, the complexities of the human psyche, and the differences in behavior between people are all reasons that human behavior is difficult to study. Thus, when studying behavior, it is easier to look at something much more simple, such as a mealworm.
