2nd Edition Sonntag And Borgnakke

In thermodynamics, an isentropic process is an idealized thermodynamic process that is both adiabatic and reversible. The work transfers of the system are frictionless, and there is no transfer of heat or matter. Such an idealized process is useful in engineering as a model of and basis of comparison for real processes. The word "isentropic" is occasionally, though not customarily, interpreted ...

In a real gas turbine, mechanical energy is changed irreversibly (due to internal friction and turbulence) into pressure and thermal energy when the gas is compressed (in either a centrifugal or axial compressor). Heat is added in the combustion chamber and the specific volume of the gas increases, accompanied by a slight loss in pressure. During expansion through the stator and rotor passages ...

En dampmaskin er en varmekraftmaskin som omformer varmeenergi til mekanisk arbeid med vann som arbeidsmedium. Virkemåten til en stempeldampmaskin er at damp under trykk fra en dampkjele virker med en kraft på stemplene og setter disse i bevegelse. Bevegelsen overføres via veivstenger til en veivaksling, det gir en roterende bevegelse som kan drive propellen på et skip, hjulene på et ...
