4 Chapter 23 Solutions \*23.8 Let the third bead have charge  $Q$  and be located distance  $x$  from the left end of the rod. This bead will experience a net force given by  $F = k e()^3 q Q x^2 i + k e() q Q () d - 2 () - i$  The net force will be zero if  $3 x^2 1 () d - 2$ , or  $d - x = x^3$  This gives an equilibrium position of the third bead of  $x = 0.634d$  The equilibrium is stable if the third bead has ...

Section 23: Problem 9 Solution Working problems is a crucial part of learning mathematics. No one can learn topology merely by poring over the definitions, theorems, and examples that are worked out in the text. One must work part of it out for oneself. To provide that opportunity is the purpose of the exercises.

You may need to review vector addition in Chapter 3. The electric field at point P can be found by adding the electric field vectors due to each of the two lower point charges: The electric field from a point charge is  $\frac{1}{4\pi\epsilon_0} \frac{q}{r^2} \hat{r}$ . As shown in the solution figure at right,  $\vec{E}_1$  is to the right and upward at  $600 \text{ N/C}$  and  $\vec{E}_2$  is to the left and upward ...
