Hubble's law, also known as the Hubble-Lemaître law, is the observation in physical cosmology that: . Objects observed in deep space—extragalactic space, 10 megaparsecs (Mpc) or more—are found to have a redshift, interpreted as a relative velocity away from Earth;; This Doppler shift-measured velocity of various galaxies receding from the Earth is approximately proportional to their ...

In the first three units of The Physics Classroom, we utilized Newton's laws to analyze the motion of objects. Force and mass information were used to determine the acceleration of an object. Acceleration information was subsequently used to determine information about the velocity or displacement ...

Abstract. Estimating work effort in agile projects is fundamentally different from traditional methods of estimation. The traditional approach is to estimate using a "bottom-up" technique: detail out all requirements and estimate each task to complete those requirements in hours/days, then use this data to develop the project schedule.

Aerodynamics, from Greek ἀήρ aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...

Say the good ship Polaris has a mass of 181,000 kilograms (181 metric tons). It has super powerful Nuclear Salt Water Rockets with an exhaust velocity of 182,000 meters per second (because it is using 22% enriched uranium) and a remass flow of 71 kilograms per second. If the Polaris is floating in space with a speed of zero, how fast will it be moving if it burns its engine for ten seconds?

The Formula for Calculating Inflation. The formula for calculating the Inflation Rate using the Consumer Price Index (CPI) is relatively simple. Every month the Bureau of Labor Statistics (BLS)

surveys thousands of prices all over the country and generates the CPI or (Consumer Price Index). If you don't know it, you can find it here: [Consumer Price Index 1913-Present](#).

Heat travels only from hot to cold. Carnot's principle. In 1824, Sadi Carnot gave a fundamental limitation of steam engines by analyzing the ideal engine now named after him, which turns out to be the most efficient of all possible heat engines. This result is probably best expressed with the fundamental thermodynamical concepts which were fully developed after Carnot's pioneering work ...

The second problem is that not all the energy from the blast is dangerous. Some of it is in the form of neutrinos, which are utterly harmless (you know, those slippery little customers who can fly through one light year of solid lead like nothing is there).. First off, a particle will only annihilate with the corresponding anti-particle.This means if an electron hits an anti-proton, they will ...
