ACIDS, BASES AND pH. There are millions of chemical substances in the world. Some of them have acidic properties, others, basic properties. Acids are substances which free hydrogen ions (H^+), when they are mixed with water. Bases are substances which free hydroxide ions (OH^-) when they are mixed with water. (This freeing of ions is called dissociation in both cases).

The Role of H^+ and OH^- Ions In the Chemistry of Aqueous Solutions . Because oxygen (EN = 3.44) is much more electronegative than hydrogen (EN = 2.20), the electrons in the $H-O$ bonds in water aren't shared equally by the hydrogen and oxygen atoms. These electrons are drawn toward the oxygen atom in the center of the molecule and away from the hydrogen atoms on either end.

Definitions of Acids and Bases, and the Role of Water

Works through the basics of neutralisation reactions, from identifying the reactants and products, to working out the products of reactions. Colour-coded key attached to help pupils recognise acids, bases and salts by name.

The key to understanding acids (as well as bases and salts) had to await Michael Faraday's mid-nineteenth century discovery that solutions of salts (now known as electrolytes) conduct electricity. This implies the existence of charged particles that can migrate under the influence of an electric field.

Test the pH of things like coffee, spit, and soap to determine whether each is acidic, basic, or neutral. Visualize the relative number of hydroxide ions and hydronium ions in solution. Switch between logarithmic and linear scales. Investigate whether changing the volume or diluting with water affects the pH. Or you can design your own liquid!
