### **Where To Solution**

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that are specific to solvation.

I wonder what Jasper said—sounds like it was of use. To me, the difference between a solution to a problem and a solution for a problem is that the latter indicates a possible, suggested solution (yet to be verified as something that truly solves the problem), while the former is a more definitely efficient solution—if applicable, the only possible solution.
