The Brønsted–Lowry theory is an acid–base reaction theory which was proposed independently by Johannes Nicolaus Brønsted and Thomas Martin Lowry in 1923. The fundamental concept of this theory is that when an acid and a base react with each other, the acid forms its conjugate base, and the base forms its conjugate acid by exchange of a proton (the hydrogen cation, or  $H^+$ ).

Pearson, as an active contributor to the biology learning community, is pleased to provide free access to the Classic edition of The Biology Place to all educators and their students.

### **Pearson - The Biology Place - Prentice Hall**

It is important to think of the acid-base reaction models as theories that complement each other. For example, the current Lewis model has the broadest definition of what an acid and base are, with the Brønsted-Lowry theory being a subset of what acids and bases are, and the Arrhenius theory being the most restrictive.

You can calculate the correlation between two variables by a measurement known as the Pearson Product Moment Correlation (also called Pearson's correlation or Spearman rank correlation). You may know that you can make this calculation, often designated by the letter "r," using statistical software, such as SPSS or R. But did you know that you can even do it with good-old Microsoft Excel?

AP Chemistry Updates and New Resources for 2019-20. To help more students prepare for—and succeed on—the AP Chemistry Exam, we've clarified the course's focus starting with the 2019-20 school year and are introducing new resources for your classroom. We've also moved exam registration to the fall, a best practice that improves students' chances of earning college credit and

placement.
