Two Step Equation Worksheets With

The main difference between one-step equations and two-step equations is that one more step you need to do in order to solve a two-step equation. That additional step may be something like multiplying the variable by a certain number to get rid of a fraction in front of it. Otherwise, the rules are the same as before and these equations are just as easy to learn and solve as are the one-step ones

Quadratics are algebraic expressions of the form. $ax^2 + bx + c$. Where a, b, and c are all constants (numbers, basically). We are first going to look at factorising quadratics where the number before the x^2 term, a, is 1, and then later (just for the higher students) we will look at how to factorise quadratics where a is something other than 1.. The aim of factorising is to break something up ...
