The covalent bonding portion starts by showing students how Cl and Cl bond when they come in contact with one another to share unpaired electrons. This is followed by showing oxygen bonding to another oxygen with a double bond with two bonding pairs of electrons. The notes end with a summary of ionic, covalent and metallic bonds.

Ward's® Introduction to Covalent Molecules Lab Activity. The three-dimensional models provide a realistic representation of the configuration of a substance and indicate its physical properties. Studying the electron-dot diagram and then building a molecular model allows students to more easily grasp how unshared electron pairs and covalent bonds determine the structure of molecules.
