The first equation is a cubic function, which produces a function similar to the graph. The second equation is quadratic and thus, a parabola. The graph does not look like a parabola, so the 2nd equation will be incorrect. The third equation describes a line, but the graph is not linear; the third equation is incorrect.

Quadratic Functions - Lesson 1. The graph of a quadratic function is called a parabola. A parabola contains a point called a vertex. The parabola can open up or down. If the parabola opens up, the vertex is the lowest point. This point is called the minimum point. If the parabola opens down, the vertex is the highest point.

So, graphing functions is pretty much the same as graphing equations. There is one function that we've seen to this point that we didn't really see anything like when we were graphing equations in the first part of this chapter. That is piecewise functions. So, we should graph a couple of these to make sure that we can graph them as well.
