Extrinsic factors such as parent material, climate, topography and hydrology may influence potential values of soil properties to such a degree that it is impossible to establish universal target values, at least not in absolute terms. Soil quality assessment thus needs to include baseline or reference values in order to enable identification of management effects.

Spawn is the eggs and sperm released or deposited into water by aquatic animals. As a verb, to spawn refers to the process of releasing the eggs and sperm, and the act of both sexes is called spawning. Most aquatic animals, except for aquatic mammals and reptiles, reproduce through the process of spawning.. Spawn consists of the reproductive cells of many aquatic animals, some of which will ...
