String-valued functions return NULL if the length of the result would be greater than the value of the max_allowed_packet system variable. See Section 8.12.2, "Tuning Server Parameters".. For functions that operate on string positions, the first position is numbered 1. For functions that take length arguments, noninteger arguments are rounded to the nearest integer.

Thanks for a great post on using Excel CUBE functions with PowerPivot. I'd like to contribute with a discovery I made today and hope that someone here may help solve the last piece of the puzzle of filtering CUBEVALUE calculations by a random date range - here are the pieces I have so far:

Using Excel CUBE Functions with PowerPivot - PowerPivotPro

1 Introduction. The Unicode Standard prescribes a memory representation order known as logical order. When text is presented in horizontal lines, most scripts display characters from left to right. However, there are several scripts (such as Arabic or Hebrew) where the natural ordering of horizontal text in display is from right to left.

UAX #9: Unicode Bidirectional Algorithm

Note: the information in this annex is not intended as an exhaustive description of the use and interpretation of Unicode character properties and behavior. It must be used in conjunction with the data in the other files in the Unicode Character Database, and relies on the notation and definitions supplied in The Unicode Standard.

UAX #44: Unicode Character Database

Other colours are a surprise! Also, I am not American, so I call "periods" full stops and I spell words the right way. I've tried to avoid discussing things Americans and other people disagree on in this guide (and specifically mention it when it does come up), but one or two little things may have crept in, for which I apologise (with an "s") in advance.

PowerShell is a task automation and configuration management framework from Microsoft, consisting of a command-line shell and associated scripting language. Initially a Windows component only, known as Windows PowerShell, it was made open-source and cross-platform on 18 August 2016 with the introduction of PowerShell Core. The former is built on .NET Framework while the latter on .NET Core.
