In this section we will discuss a couple of methods for solving equations that contain logarithms. Also, as we'll see, with one of the methods we will need to be careful of the results of the method as it is always possible that the method gives values that are, in fact, not solutions to the equation.

Solving One and Two Step Equations Guided Notes: This is a set of guided notes designed to show students how to solve one and two step equations. Answer keys are included! I give my students these guided notes one page at a time. Then, I post them on the smart board and we fill them out together.

### Solving One and Two Step Equations: Basic Guided Notes

A two-step equation is as straightforward as it sounds. You will need to perform two steps in order to solve the equation. One goal in solving an equation is to have only variables on one side of the equal sign and numbers on the other side of the equal sign. The other goal is to have the number in front of the variable equal to one. The variable does not always have to be x.
