Under the common ABO blood typing process, a person's blood type could be A, B, AB or O. It is very important for people to know their own blood type, as well as that of their spouse and children. Important decisions concerning emergency blood transfusions may have to be made quickly, so having this information on hand for medical professionals can shave precious minutes off the initial triage ...

Mendelian inheritance is a type of biological inheritance that follows the laws originally proposed by Gregor Mendel in 1865 and 1866 and re-discovered in 1900. These laws were initially controversial. When Mendel's theories were integrated with the Boveri-Sutton chromosome theory of inheritance by Thomas Hunt Morgan in 1915, they became the core of classical genetics.

**Mendelian inheritance - Wikipedia**

Human ABO blood type is determined by a single gene that comes in 3 distinct alleles:  $I^A$ ,  $I^B$ , and  $i$ . The  $I^A$  and  $I^B$  alleles are each dominant to the  $i$  allele, but are codominant with each other, meaning that both phenotypes are expressed in the heterozygote.

An allele (/ ə ' l i : l /) is a variant form of a given gene. Sometimes, the presence of different alleles of the same gene can result in different observable phenotypic traits, such as different pigmentation. A notable example of this trait of color variation is Gregor Mendel's discovery that the white and purple flower colors in pea plants were the result of "pure line" traits which could ...
