Isotope vs. nuclide. A nuclide is a species of an atom with a specific number of protons and neutrons in the nucleus, for example carbon-13 with 6 protons and 7 neutrons. The nuclide concept (referring to individual nuclear species) emphasizes nuclear properties over chemical properties, whereas the isotope concept (grouping all atoms of each element) emphasizes chemical over nuclear.

PS was degraded in the presence of base catalysts at 400 °C for 2 hr with MgO and 3 hr with CaO and BaO. The results are given in Table 1. The amount of gas products was calculated by subtracting the sum of weight for liquids, residues, and catalysts with coke from the total weight of PS sample, and the catalyst loaded to the reactor for degradation.
