Development of the male external genitalia is dependent upon dihydrotestosterone which is produced by the testes. As the genital tubercle is elongating and growing to form the penis, the urogenital folds which lie on either side of the urogenital membrane begin to move towards each other forming a groove, this is known as the urethral groove.

Endometriosis is a condition in which cells similar to those in the endometrium, the layer of tissue that normally covers the inside of the uterus, grow outside of it. Most often this is on the ovaries, fallopian tubes, and tissue around the uterus and ovaries; however, in rare cases it may also occur in other parts of the body. The main symptoms are pelvic pain and infertility.

Endometriosis - Wikipedia

We partnered with the American Cancer Society and Google to use machine learning to discover patterns in breast cancer tissues. Now, the American Cancer Society is set up to discover insights that could help prevent and treat breast cancer.
