The mathematical differential of the velocity curve $f(x)$ against time, is the acceleration. That means if you plot the velocity curve against time and measure the slope of the curve at a given point in time T you would have the acceleration at that time.

Converting Acceleration, Velocity & Displacement

One of the three aims of the new curriculum states that pupils (of all ages, not just primary

children) will: become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately.
