Geometry Module 5: Circles With and Without Coordinates. This module brings together the ideas of similarity and congruence and the properties of length, area, and geometric constructions studied throughout the year.

Geometry Module 5 | EngageNY

Equivalence angle pairs. Angles that have the same measure (i.e. the same magnitude) are said to be equal or congruent. An angle is defined by its measure and is not dependent upon the lengths of the sides of the angle (e.g. all right angles are equal in measure).; Two angles which share terminal sides, but differ in size by an integer multiple of a turn, are called coterminal angles.

The slope of this line would equal 20 cm divided by 0.1 sec or 200 cm/sec. This represents the ball's average velocity as it moves across the table.

PhysicsLAB: Constant Velocity: Position-Time Graphs

Tilt of the Earth's Axis . The ecliptic plane can be defined as a two-dimensional flat surface that geometrically intersects the Earth's orbital path around the Sun. On this plane, the Earth's axis is not at right angles to this surface, but inclined at an angle of about 23.5° from the perpendicular.

IXL | Learn Geometry

A plane is a two-dimensional doubly ruled surface spanned by two linearly independent vectors. The generalization of the plane to higher dimensions is called a hyperplane. The angle between two intersecting planes is known as the dihedral angle. The equation of a plane with nonzero normal vector $n=(a,b,c)$ through the point $x_0=(x_0,y_0,z_0)$ is $n \cdot (x-x_0)=0$, (1) where $x=(x,y,z)$.
