Each pair of segments will be the same distance  $r$  from  $m$ . No matter where the mass segment is located on the ring, only the force components pointing along the  $x$ -axis, towards the center of the ring at the origin, will contribute towards the force of gravitational attraction between the ring and the point mass.

The following article will attempt to explain the basic theory of the frequency response function. This basic theory will then be used to calculate the frequency response function between two points on a structure using an accelerometer to measure the response and a force gauge hammer to measure the excitation.
