To create lasting climate change mitigation, the replacement of high carbon emission intensity power sources, such as conventional fossil fuels—oil, coal, and natural gas—with low-carbon power sources is required. Fossil fuels supply humanity with the vast majority of our energy demands, and at a growing rate.

Climate change mitigation - Wikipedia

Emissions trading (also known as cap and trade) is a market-based approach to controlling pollution by providing economic incentives for achieving reductions in the emissions of pollutants.. A central authority (usually a governmental body) allocates or sells a limited number of permits to discharge specific quantities of a specific pollutant per time period.

Emissions trading - Wikipedia

Interesting, a LEED building would be hard pressed to beat one with no occupants and no energy usage. Energy Intensity Index: On a delivered energy basis, the overall commercial sector energy intensity in 2004 was about the same as in 1985.
