The fundamental theorem of algebra states that every non-constant single-variable polynomial with complex coefficients has at least one complex root. This includes polynomials with real coefficients, since every real number is a complex number with an imaginary part equal to zero.. Equivalently (by definition), the theorem states that the field of complex numbers is algebraically closed.

Fundamental theorem of algebra - Wikipedia

For $b = 1$ the real exponential function is a constant and the derivative is zero because $e^b = e$, for positive a and $b > 1$ the real exponential functions are monotonically increasing (as depicted for $b = e$ and $b = 2$), because the derivative is greater than zero for all arguments, and for $b < 1$ they are monotonically decreasing (as depicted for $b = 1/2$), because the derivative is less than zero ...

Exponential function - Wikipedia

This unit begins with a fundamental treatment of exponent rules and the development of negative and zero exponents. We then develop the concepts of exponential growth and decay from a fraction perspective.
