This review article summarises the sources, occurrence, fate and effects of plastic waste in the marine environment. Due to its resistance to degradation, most plastic debris will persist in the environment for centuries and may be transported far from its source, including great distances out to sea.

1. Introduction. A major unforeseen consequence of the “Plastic Age” is the material's ability to proliferate in innumerable sizes, shapes and colors throughout the marine environment worldwide (Moore, 2003). The physical characteristics of most plastics show high resistance to aging and minimal biological degradation.

A harmful algal bloom (HAB) contains organisms that can severely lower oxygen levels in natural waters, killing marine life. Some HABs are associated with algae-produced toxins. Blooms can last from a few days to many months. After the bloom dies, the microbes which decompose the dead algae use up even more of the oxygen, which can create fish die-offs.

SCAPE's Living Breakwaters proposal for Rebuild by Design. Outside the academic press, the first truly substantive critique of New York's laggard hurricane recovery came in a 2016 article in Rolling Stone. Climate journalist Jeff Goodell quoted an anonymous architect who said, of BIG's vision, “when it's done, it's just going to be a big, dumb wall,” a prediction born out three ...

I think the controversy over GMOs represents one of the greatest science communications failures of the past half-century. Millions, possibly billions, of people have come to believe what is essentially a conspiracy theory, generating fear and misunderstanding about a whole class of technologies on an unprecedentedly global scale.
