An aqueduct is a watercourse constructed to carry water from a source to a distribution point far away. In modern engineering, the term aqueduct is used for any system of pipes, ditches, canals, tunnels, and other structures used for this purpose. The term aqueduct also often refers specifically to a bridge on an artificial watercourse. The word is derived from the Latin aqua ("water") and ...

Falkenmark (1997) also made some allowance for domestic water requirements, i.e. 36 m³ per person per year, and a per capita industrial allowance of 180 m³ per person per year. The total annual per capita water requirement is therefore ~1000 m³. As this is regarded as a basic requirement, some water stress is still considered to occur when the annual per capita water availability is ...

Soil, water, air, and plants are vital natural resources that help to produce food and fiber for humans. They also maintain the ecosystems on which all life on Earth ultimately depends. Soil serves as a medium for plant growth; a sink for heat, water, and chemicals; a filter for water; and a biological medium for the breakdown of wastes.

Before the development of aqueduct technology, Romans, like most of their contemporaries in the ancient world, relied on local water sources such as springs and streams, supplemented by groundwater from privately or publicly owned wells, and by seasonal rain-water drained from rooftops into storage jars and cisterns. The reliance of ancient communities upon such water resources restricted ...

Daylighting Installation: The application of security film must, at a minimum, cover the clear area (a.k.a. the portion of the glass unobstructed by the frame) of the window. This minimum application to the exposed glass without any means of attachment or capture within the frame, termed "daylight" installation, is commonly used for retrofitting windows.
