The main function of the urinary system is to remove waste from the blood in form of urine. This process is made possible through the use of selected organs but the main one is the kidney, which removes urea from the blood through tiny filtering units called nephrons. Test out what you know about the urinary system by taking up the quiz below.

The organ system that performs this function in humans—the urinary system—is the topic of this chapter. The organs of the urinary system are organs of excretion—they remove wastes and water from the body. Specifically, the urinary system “cleans the blood” of metabolic wastes, which are substances produced by the body that it cannot

### **The Urinary System - Higher Education**

The renal system, which is also called the urinary system, is a group of organs in the body that filters out excess fluid and other substances from the bloodstream. The purpose of the renal system is to eliminate wastes from the body, regulate blood volume and pressure, control levels of electrolytes and metabolites, and regulate blood pH.

### **Overview of the Urinary System | Boundless Anatomy and ...**

Disorders Related to the Urinary System. Kidney Stones. Extracorporeal shock wave lithotripsy (ESWL) is a procedure used to shatter simple stones in the kidney or upper urinary tract. Ultrasonic waves are passed through the body until they strike the dense stones. Kidney Failure – kidneys no longer filter substances from the blood.
