An acid is a molecule or ion capable of donating a proton (hydrogen ion  $H^+$ ), or, alternatively, capable of forming a covalent bond with an electron pair (a Lewis acid).. The first category of acids is the proton donors or Brønsted acids. In the special case of aqueous solutions, proton donors form the hydronium ion  $H_3O^+$  and are known as Arrhenius acids. ...

**Acid - Wikipedia**

Carbonic acid is a chemical compound with the chemical formula  $H_2CO_3$  (equivalently  $OC(OH)_2$ ). It is also a name sometimes given to solutions of carbon dioxide in water (carbonated water), because such solutions contain small amounts of  $H_2CO_3$ . In physiology, carbonic acid is described as volatile acid or respiratory acid, because it is the only acid excreted as a gas by the lungs.

First Connection with SSH Note that executing `sshd.sh` takes a while to execute and generates three pairs encryption keys for secure communication between the CH3SNAS and a remote client (computer). Each pair has a "fingerprint" for the public key and a corresponding graphical "randomart" image. The fingerprint for the RSA encryption algorithm will incidentally show up again in the next ...

A block cipher is so-called because the scheme encrypts one block of data at a time using the same key on each block. In general, the same plaintext block will always encrypt to the same ciphertext when using the same key in a block cipher whereas the same plaintext will encrypt to different ciphertext in a stream cipher.
