Algebra can essentially be considered as doing computations similar to those of arithmetic but with

non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra belongs to the theory of equations and is not, nowadays, considered as belonging to algebra (in fact, every proof must use ...

Before we see how to add and subtract integers, we define terms and factors.. Terms and Factors. A term in an algebraic expression is an expression involving letters and/or numbers (called factors), multiplied together.. Example 1. The algebraic expression $.5x$. is an example of one single term. It has factors 5 and x .. The 5 is called the coefficient of the term and the x is a variable.

We cannot say that the equation $x = y^2$ represents a function because when we input 4 for x , we get two different answers for y (2 and -2). Therefore, this does not satisfy the definition for a function: "the value of the first variable corresponds to one and only one value for the second value". We have more than one value for y . Hopefully with these two examples, you now understand the ...
