A metalloid is a type of chemical element which has properties in between, or that are a mixture of, those of metals and nonmetals. There is neither a standard definition of a metalloid nor complete agreement on the elements appropriately classified as such. Despite the lack of specificity, the term remains in use in the literature of chemistry.. The six commonly recognised metalloids are boron ...

Metalloid - Wikipedia

The history of chemistry represents a time span from ancient history to the present. By 1000 BC, civilizations used technologies that would eventually form the basis of the various branches of chemistry. Examples include extracting metals from ores, making pottery and glazes, fermenting beer and wine, extracting chemicals from plants for medicine and perfume, rendering fat into soap, making ...

No joke, worst chemistry professor in SDSU. Cannot explain any concept even if his life depended on it, you pretty much rely on the book because he has a very scattered lecture.

Douglas Grotjahn at San Diego State University ...

It is widely accepted that lipase-catalyzed reactions (hydrolysis, esterification, etc.) can be described by a ping-pong bi-bi mechanism, which proceeds through the formation of an acyl-enzyme, as it is expressed in reaction Scheme 1 (as modified from Cleland, 1970). In Scheme 1 E = lipase, A = ester moiety, P = alcohol moiety, F = Acyl-lipase, Q = acid moiety, and i = 1, 2, ..., l and j = 1, 2 ...

Vision of a Future Human Composting Facility, Image by MOLT Studios; Credit: Recompose. AirTalk® The term "recomposition" might bring to mind images of bony skeleton hands bursting up from gravesites and the undead being reanimated, but in reality it's an alternative method to burying or cremating human remains.
