An introduced species (alien species, exotic species, non-indigenous species, or non-native species) is a species living outside its native distributional range, but which has arrived there by human activity, either deliberate or accidental. Non-native species can have various effects on the local ecosystem. Introduced species that become established and spread beyond the place of introduction ...

**Introduced species - Wikipedia**

Genetics is the study of genes, and tries to explain what they are and how they work. Genes are how living organisms inherit features or traits from their ancestors; for example, children usually look like their parents because they have inherited their parents' genes. Genetics tries to identify which traits are inherited, and explain how these traits are passed from generation to generation.

Photosynthesis - Part I: The Sun and Light Not all of the light from the Sun makes it to the surface of the Earth. Even the light that does make it here is reflected and spread out. The little light that does make it here is enough for the plants of the world to survive and go through the process of photosynthesis. Light is actually energy, electromagnetic energy to be exact.

**Biology4Kids.com: Plants: Photosynthesis**

Flowers and pollination. Flowers are the reproductive organ only of flowering plants (Angiosperms). The petals of a flower are often brightly colored and scented to attract insects and other pollinators. The stamen is the male part of the plant. It is composed of the filament (a stalk) that holds the anther, which produces the pollen. Pollen is needed for plants to produce seeds.

Notes. In the beginning () . Compare with Gen 2:4-25 in which the order of events is entirely different.. The Genesis 1 account conflicts with the order of events that are known to science. The earth and "heaven" are created together "in the beginning," whereas according to current estimates, the earth and universe are about 4.6 and 13.8 billion years old, respectively.

Cross sectional diagram of our Three Bin Composter "Why start a worm farm? A fisherman might become a worm farmer to simply raise worms for fishing bait, but the more likely motivation these days, would be to convert organic waste directly into compost, using a process known as vermiculture or vermicomposting to make a rich organic fertilizer for the garden or for pot plants".
