Aerodynamics, from Greek ἀήρ aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...

A stall is a condition in aerodynamics and aviation such that if the angle of attack increases beyond a certain point then lift begins to decrease. The angle at which this occurs is called the critical angle of attack. This critical angle is dependent upon the airfoil section or profile of the wing, its planform, its aspect ratio, and other factors, but is typically in the range of 8 to 20 ...

INTRODUCTION. Recently, the need for micro air vehicles has resulted in an increase in the attention to bird flight and in the study of their performance as they fly at low Reynolds numbers (Carruthers et al. 2010). It is very important to seek the viable aspects in studying natural flyers that can be implemented in practical applications such as wing aerodynamics, structure and control, as ...
