Property, in the abstract, is what belongs to or with something, whether as an attribute or as a component of said thing. In the context of this article, it is one or more components (rather than attributes), whether physical or incorporeal, of a person's estate; or so belonging to, as in being owned by, a person or jointly a group of people or a legal entity like a corporation or even a society.

For thousands of years, devices have been used to measure and keep track of time. The current sexagesimal system of time measurement dates to approximately 2000 BC from the Sumerians.. The Egyptians divided the day into two 12-hour periods, and used large obelisks to track the movement of the sun. They also developed water clocks, which were probably first used in the Precinct of Amun-Re, and ...

Yes, but you don't get a private set. The OP would like the equivalent of an auto-implemented ReadOnly property that you can set inside the class. You bring up an interesting point though. You may be able to have a ReadOnly public property, but use the being the scenes \_Name private property to set it. But if there's any behavior you want to put in the Set that might not work so well.

From the Choosing Between Properties and Methods section of Design Guidelines for Developing Class Libraries:. In general, methods represent actions and properties represent data. Properties are meant to be used like fields, meaning that properties should not be computationally complex or produce side effects.
