Theoretical physics is a branch of physics that employs mathematical models and abstractions of physical objects and systems to rationalize, explain and predict natural phenomena. This is in contrast to experimental physics, which uses experimental tools to probe these phenomena. The advancement of science generally depends on the interplay between experimental studies and theory.

According to Sternberg, a complete explanation of intelligence entails the interaction of these three subtheories. The componential subtheory specifies the potential set of mental processes that

underlies behavior (i.e., how the behavior is generated) while the contextual subtheory relates intelligence to the external world in terms of what behaviors are intelligent and where.

INTRODUCTION. Some anthropologists and social psychologists maintain that love is a cultural universal. They believe that at least one variety of love, romantic love, is likely to have appeared in all human groups at all times in human history (see Hatfield & Rapson 2002). As evidenced by ancient human artifacts, it is clear that love, in one form or another, has always been on people's minds.
