In physics, sound is a vibration that typically propagates as an audible wave of pressure, through a transmission medium such as a gas, liquid or solid.. In human physiology and psychology, sound is the reception of such waves and their perception by the brain. Humans can only hear sound waves as distinct pitches when the frequency lies between about 20 Hz and 20 kHz.

Polarization (also polarisation) is a property applying to transverse waves that specifies the geometrical orientation of the oscillations. In a transverse wave, the direction of the oscillation is perpendicular to the direction of motion of the wave. A simple example of a polarized transverse wave is vibrations traveling along a taut string (see image); for example, in a musical instrument ...

FORCES . A force is any push or pull that causes an object to move, stop, or change speed or direction.; The greater the force, the greater the change in motion will be. The more massive an object, the less effect a given force will have on the object.; Unless acted on by a force, objects in motion tend to stay in motion and objects at rest remain at rest.

Kronos Audio burst onto the scene some four years ago, the brainchild of one Louis Desjardins of Montreal, Quebec, Canada. Louis studied science at Concordia University in Montreal, with a primary focus on the physics of waves as applied to both light and sound, particularly how those waves and vibrations were transmitted, reflected, and shifted when passing through different materials.

A Doppler test is a non-invasive medical test used to examine blood flow through major arteries. Sometimes called a Doppler ultrasound, the test helps doctors identify blockages that can lead to health complications, such as a stroke. Doppler imaging also helps doctors diagnose conditions such as arterial occlusion, blood clots, tumors and problematic issues with arteries and veins.
