Lead in Drinking Water. Lead is a toxic metal that gets into drinking water from lead or galvanized iron pipes and fittings, lead solder, and brass or chrome fixtures. Lead can be found in public and private water systems and in household plumbing. Lead pipes were commonly used for drinking water until the 1940s. Vermont Plumbing Rules banned lead...

dec.vermont.gov

Amended in 1986 and 1996, this Act required lead content of 8% or less for plumbing fixtures, valves, fittings and pipe. Recently, states have begun to pass laws that lower this requirement. In the California and Vermont, as of January 1, 2010, lead has been outlawed in all pipes, valves and fittings used in potable water systems.

New Lead-Free Regulations

The restrictions of Act 193 apply in all buildings, even those buildings not covered by the Plumbing Rules. The Vermont Attorney General's Office has issued guidance on Act 193 and lead in plumbing supplies. For additional information on Act 193, please visit the Vermont Attorney General's website or call 802-828-5507.
