A sphere (from Greek σφαῖρα — sphaira, "globe, ball") is a perfectly round geometrical object in three-dimensional space that is the surface of a completely round ball (viz., analogous to the circular objects in two dimensions, where a "circle" circumscribes its "disk").. Like a circle in a two-dimensional space, a sphere is defined mathematically as the set of points that are all at ...

The calculation of the wetted area and volume of a vertical vessel is required for engineering tasks such fire studies and the determination of level alarms and control set points. However the calculation of these parameters is complicated by the geometry of the vessel, particularly the heads. This article details formulae for calculating the wetted area and volume of these vessels for various ...

(2015-06-15) Simson line of a point on the circumcircle of a triangle The line containing its three projections along the sides of the triangle. By definition, the pedal triangle of a point P with respect of a triangle ABC is the triangle formed by the orthogonal projections of P along the three sides of ABC.. That pedal triangle is flat (i.e., its vertices are collinear) if and only if P is ...

Surface Thermodynamics. Surface Energy and Surface Tension. The internal energy of a one-component solid  $U$  is a function of the entropy  $S$ , volume  $V$ , and number of particles  $N$ :.. that define the temperature  $T$ , the pressure  $P$  and the chemical potential  $\mu$  of the bulk. The extensive property  $U(S,V,N) = U(S,V,N)$  leads to the Euler equation:  $U = TS - PV + \mu N$

Flux describes any effect that appears to pass or travel (whether it actually moves or not) through a surface or substance. A flux is either a concept based in physics or used with applied mathematics.Both concepts have mathematical rigor, enabling comparison of the underlying mathematics when the terminology is unclear.
