How acidic or basic something is can be measured by a scale called pH, which ranges from 0 to 14. For example, an acidic pH is below 7, such as lemon juice or vinegar. A basic pH is above 7, such as baking soda or bleach. A neutral pH is about 7, which is typically the pH of water. For more on these topics, see the Science Buddies webpage on Acids, Bases, & the pH Scale.

Key Findings and Conclusion. Halal status of ethanol is highly controversial but rarely classified based on its source and concentration. Any ethanol produced by anaerobic fermentation and ranging between 1 and 15% is considered to be Haram (non-Halal, Forbidden), whereas ethanol produced by natural fermentation and less than 1% is considered as preserving agent and its Halal status is allowed.

This article directly addresses the scientific evidences in favor of macroevolutionary theory and common descent. It is specifically intended for those who are scientifically minded but, for one

reason or another, have come to believe that macroevolutionary theory explains little, makes few or no testable predictions, or cannot be falsified.

The vast range of maximum lifespan differences between species provides convincing evidence that longevity is genetically influenced. An elephant lives about 10–20 times longer than a mouse, yet both animals have roughly the same number of lifetime heartbeats — the elephant at 30 per minute and the mouse at 300 per minute.
