We cannot say that the equation  $x = y^2$  represents a function because when we input 4 for x, we get two different answers for y (2 and -2). Therefore, this does not satisfy the definition for a function: "the value of the first variable corresponds to one and only one value for the second value". We have more than one value for y. Hopefully with these two examples, you now understand the ...

Separation of variables is a method of solving ordinary and partial differential equations. For an ordinary differential equation  $(dy)/(dx)=g(x)f(y)$ , (1) where  $f(y)$  is nonzero in a neighborhood of the initial value, the solution is given implicitly by  $\int (dy)/(f(y))=\int g(x)dx$ . (2) If the integrals can be done in closed form and the resulting equation can be solved for  $y$  (which are two pretty ...
