Operant conditioning (also called instrumental conditioning) is a learning process through which the strength of a behavior is modified by reinforcement or punishment. It is also a procedure that is used to bring about such learning. Although operant and classical conditioning both involve behaviors controlled by environmental stimuli, they differ in nature.

What is Positive Reinforcement in Teaching and Education? Reinforcement refers to "a stimulus which follows and is contingent upon a behavior and increases the probability of a behavior being repeated" (Smith, 2017). The simplest way of conceptualizing positive reinforcement is that something pleasant is 'added' when a specific action is performed (Cherry, 2018).
