This is the first of a series of four posts about vasopressors and hemodynamics. The first step is to explore the physiology of a pure alpha-1 agonist (phenylephrine). Make no mistake, I'm not very fond of phenylephrine. I rarely use it (mostly for hypotensive atrial fibrillation). However ...

Pulmcrit - An alternative viewpoint on phenylephrine infusions

4+1 is a view model designed by Philippe Kruchten in 1995 for describing the architecture of software-intensive systems, based on the use of multiple, concurrent views. The views are used to describe the system in the viewpoint of different stakeholders, such as end-users, developers and project managers. The four views of the model are logical, development, process and physical view:

Utilitarianism is a family of consequentialist ethical theories that promotes actions that maximize happiness and well-being for the majority of a population. Although different varieties of utilitarianism admit different characterizations, the basic idea behind all of them is to in some sense maximize utility, which is often defined in terms of well-being or related concepts.
