Vector. A vector is formally defined as an element of a vector space. In the commonly encountered vector space (i.e., Euclidean n -space), a vector is given by coordinates and can be specified as $\mathbf{v} = (v_1, v_2, \dots, v_n)$. Vectors are sometimes referred to by the number of coordinates they have, so a 2-dimensional vector is often called a two-vector, an n -dimensional vector is often called an n -vector, and so on.

Calculus. In general, "a" calculus is an abstract theory developed in a purely formal way. "The" calculus, more properly called analysis (or real analysis or, in older literature, infinitesimal analysis), is the branch of mathematics studying the rate of change of quantities (which can be interpreted as slopes of curves) and the length, area, and volume of objects.

In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material which is not a physical quantity . For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately ...

In differential geometry, a geodesic ($\gamma: [a, b] \rightarrow M$, $\gamma: \mathbb{R} \rightarrow M$, $\gamma: [a, \infty) \rightarrow M$) is a curve representing in some sense the shortest path between two points in a surface, or more generally in a Riemannian manifold. It is a generalization of the notion of a "straight line" to a more general setting. The term "geodesic" comes from geodesy, the science of measuring the ...

Rutherford's own words. §1 The observations, however, of Geiger and Marsden on the scattering of α rays indicate that some of the α particles, about 1 in 20,000 were turned through an average angle of 90 degrees in passing through a layer of gold-foil about 0.00004 cm. thick, which was equivalent in stopping-power of the α particle to 1.6 millimetres of air....

2.3. Artificial neuron. In 1958, Rosenblatt introduced the mechanics of the single artificial neuron and introduced the 'Perceptron' to solve problems in the area of character recognition (Hecht-

Nielsen, 1990). Basic findings from the biological neuron operation enabled early researchers (e.g., McCulloch and Pitts, 1943) to model the operation of simple artificial neurons.
