Force in the direction of flow exerted by the fluid on the solid is called drag.. Figure shows a stationary smooth sphere of diameter D situated in a stream, whose velocity far away from the sphere is u_∞ to the right. Except at very low velocities, when the flow is entirely laminar, the wake immediately downstream from the sphere is unstable, and turbulent vortices will constantly be shed ...

Connect your Terra Fan/Filter Unit directly to a wall outlet using this 3-foot cord adapter. FFUs are built with a 4-pin electrical connector for integration with a power module in a modular cleanroom or laminar flow hood.

Cleanroom Fan Filter Units | Fan Powered HEPA Clean Room ...

Taken together, these seven areas have big implications for how – even whether – we are able to address global challenges. Positive developments abound, but the deep shifts in mindset and attitudes represented by the rise of nationalism, the growth of consumerism or the emergence of the ‘onlife’ are pushing in the opposite direction.

Roman technology is the collection of techniques, skills, methods, processes, and engineering practices which supported Roman civilization and made possible the expansion of the economy and military of ancient Rome (753 BC – 476 AD).. The Roman Empire was one of the most technologically advanced civilizations of antiquity, with some of the more advanced concepts and inventions forgotten ...

Roman technology - Wikipedia

The mainstay of the Roman republic's war machine was the manipular legion, a heavy infantry unit suitable for close-quarter engagements on more or less any terrain, which was probably adopted sometime during the Samnite Wars (343–290 BC). Despite its formidable strength, the legion had a number of deficiencies, especially a lack of cavalry.

Auxilia - Wikipedia

The total energy per mass unit in a given point in a fluid flow consists of elevation (potential) energy, velocity (kinetic) energy and pressure energy.. The Energy Equation states that energy can not disappear - the energy upstream in the fluid flow will always be equal to the energy downstream in the flow and the energy loss between the two points.. $E_1 = E_2 + E_{\text{loss}}$ (1)
