The Water Cycle: Precipitation, Condensation, and Evaporation

Once in a while, you get a glass of water and it looks cloudy; maybe milky is a better term. After a few seconds it miraculously clears up! The cloudiness might be caused by the water in the pipes being under a bit more pressure than the water in the glass, but is more likely due to tiny air bubbles in the water.

Why does my drinking water look cloudy sometimes? Water ...

What happens in the natural water cycle? The natural water cycle uses physical processes to move water from the surface of the earth to the atmosphere and back again. Evaporation is when the sun shines on water and heats it, turning it into gas called water vapour which rises into the air.; Transpiration is when the sun warms people, plants and animals and they release water vapour into the air.

Natural water cycle - Sydney Water

COC or the cycle of concentration is a abbreviation or term used when talking about cooling water. This value COC specifies how often the fresh water is used or pumped around, before the water has to blown down or bleed off from the cooling tower.

Water Softeners - Answers to the Top 25 Asked Questions

The water cycle, or the hydrologic cycle, refers to the continuous circulation of water within the Earth's hydrosphere. Water moves into and from the various reservoirs on, over, and under the surface of the Earth, and in the process transforms into its various phases of solid (ice), liquid (water), and gas (vapor), with the total mass of water remaining fairly constant.
