Vector. A vector is formally defined as an element of a vector space. In the commonly encountered vector space (i.e., Euclidean  $n$ -space), a vector is given by coordinates and can be specified as  $\vec{v}$ . Vectors are sometimes referred to by the number of coordinates they have, so a 2-dimensional vector is often called a two-vector, an  $n$ -dimensional vector is often called an  $n$ -vector, and so on.

In mathematics, an integral assigns numbers to functions in a way that can describe displacement, area, volume, and other concepts that arise by combining infinitesimal data. Integration is one of the two main operations of calculus, with its inverse operation, differentiation, being the other. Given a function  $f$  of a real variable  $x$  and an interval  $[a, b]$  of the real line, the definite integral
