A cone with a region including its apex cut off by a plane is called a "truncated cone"; if the truncation plane is parallel to the cone's base, it is called a frustum. An "elliptical cone" is a cone with an elliptical base. A "generalized cone" is the surface created by the set of lines passing through a vertex and every point on a boundary (also see visual hull).

**Cone - Wikipedia**

In geometry, a frustum (plural: frusta or frustums) is the portion of a solid (normally a cone or pyramid) that lies between one or two parallel planes cutting it. A right frustum is a parallel truncation of a right pyramid or right cone.. In computer graphics, the viewing frustum is the three-dimensional region which is visible on the screen. It is formed by a clipped pyramid; in particular ...

Volume of a Frustum of a Right Circular Cone A frustum may be formed from a right circular cone by cutting off the tip of the cone with a cut perpendicular to the height, forming a lower base and an upper base that are circular and parallel. The problem can be generalized to other cones and n-sided pyramids but for the moment consider the right circular cone.

A triangular pyramid is a pyramid having a triangular base. The tetrahedron is a triangular pyramid having congruent equilateral triangles for each of its faces. The edge length  $e$  and slant height  $s$  of a regular triangular pyramid is a special case of the formula for a regular  $n$ -gonal pyramid with  $n=3$ , given by  $e = \sqrt{h^2 + 1/3a^2}$  (1)  $s = \sqrt{h^2 + 1/(12)a^2}$ , (2) where  $h$  is the height and  $a$  ...
